

# Kihwan Kim

Software Engineer · 6+ years · Building AI products and automating operational workflows

Date of Birth: February 21, 1994 · Gender: Male · Address: Seoul, South Korea

juljin1875@gmail.com · [kihwan.kim](mailto:kihwan.kim) · [github.com/simulacre7](https://github.com/simulacre7)

---

## SUMMARY

Software engineer with 6+ years of experience building production software and AI-enabled products. My background in HCI and visual analytics shapes how I translate complex models and fragmented workflows into tools that non-expert users can operate. I have built products ranging from a no-code AutoML studio to AI-agent automation for operations teams, owning work from problem discovery through production deployment.

---

## EXPERIENCE

### Levvls — Software Engineer

2025.07 – Present

AI product development and internal operations automation.

- Mapped how operations staff gathered context across multiple internal tools, then deployed PageAgent, an AI agent workflow that reduced manual investigation from hours to minutes. Used findings from deployment to inform product improvements
- Built the AI character chat experience: separated in-progress streamed responses from persisted history, and implemented an SSE-based state machine covering send, completion, failure, and regeneration
- Built and maintained commerce interfaces across the consumer web, creator studio, and admin tools, covering discovery, checkout, and post-order flows

React · Next.js · TypeScript · SSE · Node.js · PageAgent

### RIDI Corp. — Frontend Engineer

2022.05 – 2025.07

Large, high-traffic content platform.

- Implemented server-driven UI so teams could update screens without client deployments; incrementally migrated legacy PHP pages to React
- Optimized large-list rendering with windowing and dynamic heights; used Redis to cache server-driven UI payloads; tracked real-user errors with Sentry

React · Next.js · TypeScript · Server-driven UI · Redis · Virtualization

### TmaxEnterprise — Research Engineer

2020.02 – 2022.05

Made complex AI and analytics usable for non-experts — usability and explainability first.

- Built a no-code studio so users without model-development experience could build and operate models on an AutoML platform
- Developed explainable-AI (XAI) visualizations that displayed model explanations alongside predictions, helping non-expert users interpret results

---

## EDUCATION

### Ulsan National Institute of Science and Technology (UNIST)

2013.03 – 2020.02

- **M.S. in Computer Science and Engineering** — 2018.03 – 2020.02 · research in Human–Computer Interaction and Visual Analytics (human–AI collaboration)
- **B.S. in Technology Management** — 2013.03 – 2018.02 · interdisciplinary tracks: Technology Management / Information System / Entrepreneurship, and Computer Science and Engineering

---

## MILITARY SERVICE

Technical Research Personnel (alternative military service), completed May 2020 – May 2023 while employed at TmaxEnterprise and RIDI Corp.; continued at RIDI afterward.

## SKILLS

---

- **Frontend / Full-stack:** React, Next.js, TypeScript, Node.js, SSE, server-driven UI, large-scale rendering / virtualization
- **Applied AI:** LLM-powered streaming interfaces, AI agent automation, explainable AI (XAI)

## OPEN SOURCE

---

### OpenMMO — Contributor

2026.07 – Present

Open-source MMORPG where AI agents and humans play through the same protocol (Rust · Svelte · WebAssembly).

- 10 PRs merged across the TypeScript client and Rust server, including cache eviction, account-ban handling, and trade validation

### vite-plus — Contributor

2026.08 – Present

Rust and TypeScript toolchain by VoidZero, the team behind Vite and Vitest.

- Fixed a Rust shell-integration bug that dropped the working-directory flag, and added snapshot coverage for templates across four shells — merged (#2508)
